Note. Original calculations for Cut-scores based on approximately 600 students per grade level. Scores at-or below values of below basic indicate justification for concern, scores between below basic and proficient represent questionable status and justify additional data collection to determine the nature of performance difficulties. Performance of cut scores across years and districts has been stable +/- 10% including revised ISAT 05-06 for grade 3. Cut-scores are based on a 30-60-90 rule approximated by a combination of logistic regression and discriminant function analysis with the criterion measure being the state test for Illinois (ISAT)

* based on DIBELS Cut Scores
 ** based on findings of B. Silbergitt, Ph.D.
